

**About immunizations**

- The schedule varies — Exactly when your baby gets shots can vary. Our schedule is a good guide, but your doctor may alter the schedule slightly.
- They work — Having children vaccinated can prevent them from getting serious diseases. Plus, vaccines are safe. In fact, the American Academy of Pediatricians says vaccinations protect children’s health and saves lives.

**About development**

Your pediatrician will assess your child’s development — physical, language, intellectual, social and emotional — using regular evaluations as part of each well-child visit.

**Our legacy is yours.**

Legacy Health strives to make responsible printing and paper choices that minimize our effect on natural resource

PCV (pneumococcal)			1st dose	2nd dose	3rd dose		4th dose					
IPV (polio)			1st dose	2nd dose	3rd dose							
MMR (measles, mumps and rubella)							1st dose					
Varicella (chickenpox)							1st dose					
Hepatitis A							2 doses, 6 mos. apart					
Flu							Annual vaccination					

\*Specific medical conditions may alter your child's immunization schedule. Continue your well-child visits after 30 months. See your pediatrician for a schedule.

## Keep your child healthy and happy

### Get checkups in the early years

The first years of your child's life is a fun and exciting time. It's also very busy.

Most important is health: In the first 30 months, your child should see the pediatrician regularly for checkups.

Keep this card handy and check off each visit.

- 1st week
- By 1 month
- 2 months
- 4 months
- 6 months
- 9 months
- 1 year
- 15 months
- 18 months
- 24 months
- 30 months

Continue regular yearly visits.
